Appendix A - Detailed tables of results for individual Partnerships and Local Authorities
Appendix B - Schools questionnaire
Appendix C - FE questionnaire

TNS-BMRB, an independent research company, has been responsible for conducting a series of seven annual surveys on behalf of the Department for Education (formerly Department for Children, Schools and Families). The surveys aimed to collect information about participation in PE and out of hours school sport, and took place between 2003/04 and 2009/10. The most recent survey comprised a census of all schools in England, and achieved a response rate of 99.8\% (21,436 schools), with data collection taking place during May - July 2010. In addition, a separate survey was also conducted among FE colleges in both 2008/09 and in 2009/10: the most recent of these surveys had a response rate of $99.4 \%$ (357 colleges).

## Participation in PE and school sport

- The latest survey found that across Years $1-13,55 \%$ of pupils participated in at least three hours of high quality PE and out of hours school sport during the 2009/10 academic year. This means that when compared to the previous survey (2008/09) there has been an encouraging increase of five percentage points in terms of the proportion of pupils in Years $1-13$ taking part in three hours of PE and out of hours school sport.
- Participation levels are highest in Years 4-6, and also reasonably high in Years $1-3$ and Years 7-8. They are at their lowest in Years 12 and 13. The greatest improvements over the last year have been in Years 1 - 3, while the smallest improvements have been for Years 12 and 13.
- Participation rates do not vary much between the different regions of the country, but they do vary in terms of urban and rural areas, with those in rural areas being more likely to participate in at least three hours of PE and school sport ( $60 \%$ v. $54 \%$ ). However, the gap has closed slightly over the last year.
- There is some link between high levels of participation in at least three hours of PE and out of hours school sport, and the proportion of pupils who are eligible for Free School Meals (FSM). Highest performing schools tend to have fewer pupils who are eligible for FSM than do lower performing schools. There is, however, an indication that over the last year performance has increased at a faster rate in schools with a higher proportion of children who are eligible for FSM.
- Data collected for the first time on differences in participation levels between girls and boys shows that overall boys (58\%) are more likely than girls (52\%) to take part in at least three hours of PE and school sport. There are small differences in participation levels between girls and boys in Years 1-7. However, after Year 7 the gap grows bigger.

## Curriculum time spent on PE

- Pupils across Years 1-13 spent an average of 117 minutes taking part in PE in a typical week.
- Looking back across the series of surveys, and focusing just on Years 1 - 11 (for which consistent data is available), the latest results mean that in each of the surveys there has been an increase in the average number of minutes that pupils take part in PE each week. In 2004/05 the average number of minutes for Years $1-11$ was 107, compared to 123 in the latest survey.
- Across Years $1-13,79 \%$ of pupils participated in 120 minutes or more per week of curriculum PE - up from $77 \%$ in 2008/09. Looking at the longer term trend which is based on Years 1-11, there has been an increase from 44\%
of pupils in Years $1-11$ participating in at least 120 minutes of curriculum PE in 2003/04, up to the current level of $84 \%$.
- Across the seven surveys there have been increases in all year groups in terms of the proportion of pupils participating in at least 120 minutes of curriculum PE. These increases have been most marked in Years 1-6.
- The latest survey reveals that $78 \%$ of girls in Years 1 - 13 took part in at least 120 minutes of curriculum PE, compared to $80 \%$ of boys. In Years $1-6$ there is no difference at all on this measure, but on entry to secondary school a difference begins to emerge, rising gradually to reach a four or five percentage point differential in each of Years 10, 11, 12 and 13.

## Participation in intra- and inter-school competitive activities

- The 2009/10 survey found a very large increase in the proportion of pupils participating in intra-school competitive activities during the academic year up from 69\% (of Years 1 - 11) in 2008/09 to 78\% in 2009/10.
- This increase is apparent in each and every year group, with the largest increase being in Year 1.
- $77 \%$ of boys participated in intra-school competition, compared to $73 \%$ of girls. This difference is not very apparent in Key Stages 1 and 2, but by Year 10 it has risen to five percentage points, and in Years 11 - 13 the difference is much greater than this.
- Like participation in intra-school competition in general, regular participation has also increased substantially over the last year - up from $28 \%$ of Years 3 -13 in 2008/09 to $39 \%$ in 2009/10.
- $99 \%$ of schools held at least one sports day or equivalent during the academic year.
- 49\% of pupils in Years $1-11$ participated in inter-school competition during the 2009/10 academic year. This continues the upwards trend, with a five percentage point increase in the last year.
- There are some differences in participation in inter-school competition between boys (50\%) and girls (44\%), based on Years 1-13. The difference in participation levels only become apparent at Year 4, and then increases year on year until by Year 10-13 the discrepancy is very large.
- $21 \%$ of pupils across Years $3-13$ regularly participated in inter-school competition during 2009/10, a small increase from 19\% in 2008/09.

## Sports provision

- Schools provided on average 19.0 different sports from a pre-specified list. This is a small increase over the average number of sports provided in 2008/09 (18.6).
- Football once again is the most widely provided sport.
- On average, an equal number of sports were available to both girls and boys. However, while at a primary level there were no differences at all in terms of the actual sports available, at a secondary level the survey reveals that boys and girls are often offered different sports. Specifically secondary level girls were more likely than boys to be offered dance, gymnastics, rounders, netball, hockey, trampolining, cheerleading, yoga and equestrian, while boys were more likely to be offered cricket, basketball, rugby union, golf, rugby league, table tennis, softball, boxing and baseball.

## Club links

- Schools had links to an average of 9.1 listed clubs. When compared to the 2008/09 survey, this represents an increase from 8.2, continuing the upwards trend.
- Football, cricket, dance, rugby union, swimming, athletics and tennis are the most widespread clubs.
- The main increases in club links over the last year have been for dance, swimming and tennis.

## Community sports and multi-skill clubs

- While the 2008/09 survey appeared to show that progress on participation in community sports, dance or multi-skill clubs had stalled, the latest survey indicates that participation has increased from 31\% in 2008/09 to 33\% in 2009/10.

## Gifted and talented pupils

- $8 \%$ of pupils across Years $5-13$ were registered as gifted and talented because of their ability in PE and/or school sport. This is a slight increase over the levels recorded in the three previous surveys.
- Boys (8\%) are slightly more likely than girls (7\%) to be registered. This small difference exists in all year groups, although it is slightly more exaggerated in Years 5 and 6 and in Years 11, 12 and 13.

## Sports volunteering and leadership

- Since the 2008/09 survey, the proportion of pupils from Years 1 - 13 who have been actively involved in sports volunteering and leadership during the academic year has increased from $19 \%$ to $24 \%$.
- Active involvement in sports volunteering and leadership varied by gender, with girls being marginally more likely than boys to be involved ( $25 \%$ compared to 23\%). However, this pattern varies by year group, and although in Years $2-10$ this pattern holds true, in Years 12 and 13 boys are in fact more likely than girls to be involved in sports volunteering and leadership.

## Further Education

- FESCos (Further Education Sport Co-ordinators) estimated that they or someone else had organised a total of 154 different events during the academic year - up from 92 events in the previous academic year. The largest proportion of these were participation sessions/clubs, of which FESCos had organised an average of 94 .
- FESCos indicated that $23 \%$ of all full-time pupils aged 16 - 19 had taken part in at least one of the sporting events they had organised during the year. This is up by seven percentage points on the 2008/09 figure.
- $12 \%$ of full-time students aged $16-19$ had taken part in intra-college competitive activities during the academic year, which represents a big increase from the $7 \%$ recorded in 2008/09. There was also a small increase in the proportion of students who had participated in inter-college competitive activities, from $5 \%$ in 2008/09 to 7\% in 2009/10.
- Colleges provided an average of 19.3 of the listed sports, an increase of just over three sports per college when compared to 2008/09. FESCos also reported a substantial increase in the average number of schools/educational establishments that they had links with - up from 25 to 37 per college.

## 2. Background and objectives

### 2.1 Policy background

The PE and Sport Strategy for Young People aims to get more young people taking part in high quality PE and sport. The strategy was originally set up in 2003.

To deliver this, the Government has created a network of 450 School Sport Partnerships across England. In the 2009/10 academic year there were 21,486 schools and 357 FE colleges within the PE and Sport Strategy for Young People, arranged into these partnerships.

Partnerships are 'families' of schools which typically comprise a Specialist Sports College linked to a set of secondary schools, each of which has a further group of primary and special schools clustered around it. The Partnership Development Manager (PDM) is at the core of the Strategy and is responsible for managing the partnership; in every secondary school there is a School Sport Co-ordinator (SSCo), and in every primary or special school there is a Primary Link Teacher (PLT) or Special School Link Teacher (SSLT) who is responsible for leading the strategy at that particular school. Staff are funded by the Strategy to allow them to do this. There is also a national network of 225 Competition Managers which was set up to create more and better opportunities for a wider range of young people to take part in competitive sport.

In 2008, the Strategy was expanded to cover Further Education (FE) colleges. In April 2008, a first wave of Further Education Sport Co-ordinators (FESCos) was put in place in partnerships, with a remit to increase opportunities for young people aged 16-19 years to participate, lead and volunteer in sport.

Between 2003/04 and 2007/08 TNS-BMRB (formerly TNS), an independent research company, conducted five annual surveys of schools to measure progress towards increasing participation in PE and sport by $5-16$ year olds.

In 2008/09 and 2009/10 TNS-BMRB was commissioned to conduct two further surveys of schools which measured take up of PE and sport by young people in schools and colleges. At this point the survey was also extended to cover Years 12 and 13; hence long term trend analysis is often limited to Years 1-11.

### 2.2 Research objectives

The main aim of this research was to provide very robust and reliable information from partnership schools on:

- the proportion of pupils receiving 2 hours of curriculum $\mathrm{PE}^{1}$
- and the proportion of pupils participating in at least 3 hours of high quality ${ }^{2}$ PE and school sport ${ }^{3}$ in a typical week

[^0]In addition, the research sought to collect further information on:

- the proportion of pupils involved in intra-school sport competitive activities
- the proportion of pupils involved in inter-school competitions
- the range of sports offered
- the proportion of pupils participating in clubs linked to the schools
- the proportion of pupils registered as gifted and talented because of their ability in PE and/or school sport
- the proportion of pupils actively involved in sports volunteering and leadership
- the number of schools that run a sports day

For the first time in 2009/10, the survey aimed to examine how participation in sport varied by gender.

In addition to 'top level' information, the survey also sought to provide information to help gauge the performance of individual partnerships and to track how performance has changed over time. Finally, the survey also aimed to collect information from Further Education (FE) colleges about sports provision and participation.

### 2.3 Methodological approach

The 2009/10 survey aimed to collect information from all partnership schools in the maintained sector in England (a total of 21,486 schools) and from all FE colleges (a total of 357). It also collected information from a small number of independent schools, but this information is not included in this report.

The main schools survey required schools to provide answers to 12 questions while for the FE survey, FESCos were required to answer 11 questions. For the first time in the 2009/10 survey, these questions could only be answered online by schools, and not on paper (this also applied to FE colleges) - although for the schools survey, schools were provided with a paper copy of all the documentation, including the questionnaire, to help in the collation of the information.

All partnerships were required to have active involvement in the survey process and PDMs were asked to take responsibility for data collection within their partnership. TNS-BMRB sent paper documents in bulk to PDMs for distribution to their schools; PDMs were then responsible for tracking responses, and ensuring that responses were submitted online to TNS-BMRB.

A survey website was developed which not only provided access to the online questionnaire, but also to other materials to assist with the survey. The website also provided a 'PDM area' where each PDM could log on and track which of the schools in their partnership had submitted their responses and download a copy of the actual data submitted. Both an online and a telephone helpline were made available to support partnerships during the process.

Survey packs were sent to PDMs at the end of April 2010. Each pack contained a covering letter, a set of survey instructions for PDMs, a list of schools and FE colleges in the partnership, a pre-printed questionnaire and a step-by-step guide to

[^1]the survey. The final date for schools/colleges to submit their returns was 1 July 2010, about 10 weeks after the initial mail out of questionnaires.

Returns were carefully monitored on a daily basis at TNS-BMRB, and all PDMs in partnerships with zero returns were sent an email shortly before the completion deadline, reminding them to check that everything was in order.

By the final deadline, a total of 21,436 usable responses had been received for the main schools survey, which represents an overall response rate of $99.8 \%$. This is in line with the 2008/09 survey, when both an online and a paper method of response were offered, which means that the removal of the paper means of data collection did not have any perceptible impact on the overall level of response. It is a condition of grant for partnerships that they take part in the survey. Nine out of ten of all partnerships achieved a 100\% response rate and only four partnerships achieved a response rate below $95 \%$.

For the FE survey, by the final deadline, responses had been received from 355 of the 357 FESCos, representing a response rate of $99.4 \%$.

This project was carried out in compliance with ISO 20252 - the market research quality standard.

### 2.4 New questions on gender

As has already been mentioned, for the first time in 2009/10, the survey collected information separately for boys and girls - this was for almost all of the schools survey questions.

To assist with this process a selection of around forty PDMs and SSCOs were approached and asked for their views on this new approach. Twenty six interviews were conducted in October 2009 to explore PDMs' and SSCOs' opinions on the proposed changes to the survey. Overall, PDMs' and SSCOs' views were positive and they could see the value of collecting information separately for boys and girls. As a result of these interviews DfE decided to go ahead with the new approach and the questionnaire was reviewed to collect information separately for boys and girls for most of the questions. To ensure the changes were implemented in the best manner, the new questionnaire was tested prior to mainstage fieldwork. In February 2010, fourteen PDMs and SSCOs were sent a draft version of the questionnaire with questions split by gender and the updated survey guide. Subsequently, depth interviews were carried out by telephone with these PDMs and SSCos to evaluate the content, comprehensiveness and clarity of these documents. As a result of these interviews a few minor changes were made to the questionnaire and survey guide. These included the addition of a total column to the online questionnaire such that the respondents could enter answers separately for boys and girls but see a total calculation alongside to help them check that their answers were correct. A new data collection tool was also provided with the survey documentation to support schools in collecting information by gender.

### 2.5 Validation exercise

In addition to the main data collection, a validation exercise took place to verify the accuracy of the answers to four of the key questions within the survey. These questions were:

- Q1. What is the total curriculum time in minutes that all pupils in each year group spend taking part in PE in a typical week?
- Q2. What is the total number of pupils in each year group who participate in at least three hours of high quality PE and out of hours school sport in a typical week?
- Q10. What is the total number of pupils in each year group who have participated in one or more community sports, dance or multi-skill clubs with links to the school during this academic year?
- Q12. What is the total number of pupils in each year group actively involved in sports volunteering and leadership this academic year?

The validation exercise comprised visits to $20 \%$ of the 450 partnerships which were selected at random ( 90 in total). At each partnership a face-to-face interview was carried out with the PDM and with eight randomly selected schools/FE colleges. The exercise was conducted in June and July 2010.

As in previous years, TNS-BMRB concluded that the results of the survey were robust and there was no evidence of systematic misreporting. Written evidence provided by schools and verbal accounts of data collection supported the findings of the main survey.

Consistent with previous years, TNS-BMRB concluded that there are still minor difficulties with some of the terminology used in the survey, including what constitutes a club link (as highlighted in 2008/09) and what should be included in sports volunteering and leadership.

Overall, the exercise suggested that the survey had run smoothly and PDMs, SSCos, PLTs and FESCos remain adept at conducting the survey. It is worth noting that most PDMs indicated that the inclusion of separate questions for boys and girls was a good way of maximising the value of the survey. In many cases they were already asking schools to collect data by gender for their own purposes anyway. No problems were reported to have occurred as a result of the removal of the option to complete the survey on paper.

### 2.6 Reporting

This report presents the findings from the 2009/10 survey. Where appropriate, comparisons are made with the previous six waves of data collection.

For simplicity, the figures shown in the text and charts in this report have been rounded to the nearest percentage point.

The appendices to this report contain detailed tables which list results on key questions for all partnerships and Local Authorities, together with a copy of both the schools and the FE questionnaires.

For the first five surveys, schools were asked to indicate the number of pupils in each year group who participated in at least two hours of high quality PE and out of hours school sport in a typical week. By 2007/08, $90 \%$ of pupils across Years 1-11 in partnership schools achieved this level of participation. As a result of this it was decided that the bar should be raised and that for subsequent surveys schools should be asked to provide information about participation in at least three hours of high quality PE and out of hours school sport. Figure 1 shows the responses to this question, analysed by year group and by school type - comparing the results from 2008/09 with the latest survey results.

Figure 1: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by year group and school type (2008/09 and 2009/10)

Looking across the total of Years $1-13,55 \%$ of all pupils participated in at least three hours of high quality PE and out of hours school sport in 2009/10. This has increased by five percentage points from the 2008/09 survey, when $50 \%$ had participated in at least three hours of PE and out of hours school sport.

If Years 12 and 13 are excluded and the focus is solely on Years $1-11$, then the figure is slightly higher at $57 \%$ in 2009/10 (an increase of six percentage points from $51 \%$ in 2008/09).

Both the 2008/09 and the 2009/10 surveys display similar patterns in terms of participation levels by age group (and this was also the case for the previous five surveys, when the measure was two hours of PE/school sport). Participation levels are highest in Years 4-6, and also reasonably high in Years 1-3 and Years 7-8.

They decrease steadily in the secondary phase, reaching 40\% in Year 11, and then dropping off significantly in Years 12 and 13, to just $23 \%$ and $21 \%$ respectively.

The greatest improvements between the two surveys in terms of participation in at least three hours of PE and out of hours school sport are for Years 1 - 3, while the smallest improvements are for Years 12 and 13, both showing increases of two percentage points.

Around two thirds (64\%) of pupils in primary schools and special schools participated in at least three hours of PE and out of hours school sport - both up from $57 \%$ in the 2008/09 survey. In secondary schools the figure was lower at $46 \%$, and the increase more modest (up four percentage points from 42\% in 2008/09).

Figure 2: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by region (2008/09 and 2009/10)

Participation rates did not vary much between the different regions of the country, with rates in the North West (58\%) being the highest, and rates in the West Midlands and the East (53\%) being the lowest. All regions have shown improvements on the 2008/09 rates, and these improvements are spread relatively consistently across the regions.

Both the 2008/09 and the 2009/10 surveys showed that participation rates in at least three hours of PE and out of hours school sport were higher in rural areas than in urban areas. However, the gap has narrowed slightly by two percentage points since 2008/09, with $60 \%$ of pupils in rural areas now participating compared with $54 \%$ in urban areas.

Figure 3: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by percentage of children eligible for free school meals (2008/09 and 2009/10)

Figure 3 shows the relationship between the performance of schools in regard to the proportion of pupils participating in at least three hours of PE and out of hours school sport and the proportion of pupils who are eligible for Free School Meals (FSM) ${ }^{4}$. It shows that in the schools which perform highest in terms of their pupils' participation in three hours of PE / school sport there tend to be fewer pupils who are eligible for FSM than in schools where there are lower levels of participation in the three hour PE / school sport target (33\% were defined as high \% FSM compared to 40\%).This pattern has been observed in previous surveys; in 2008/09, for example, the respective figures were $29 \%$ and $37 \%$. Conversely schools which perform highest in terms of their pupils' participation were more likely to be categorised as low \% FSM than schools with lower levels of participation ( $33 \%$ compared to $23 \%$ ).

Changes since 2008/09 largely reflect the changing profile of schools between the two survey periods. Since 2008/09 the percentage of schools with a high proportion of pupils who are eligible for FSM has increased by three percentage points from $30 \%$ to $33 \%$, while the percentage of schools with a low proportion of pupils who are eligible for FSM has decreased by five percentage points from $35 \%$ to $30 \%$. However, the changes shown in Figure 3 are not uniform and, most specifically, the increases in the proportion of high and medium performing schools that are defined as high \% FSM are above the average national 3\% increase ( $4 \%$ and 5\% respectively). Conversely, the decreases in the proportion of high and medium performing schools that are defined as low \% FSM are greater than the average national $5 \%$ decrease ( $7 \%$ in both cases). This suggests that performance on this three hour measure has increased at a faster rate in schools with a high proportion of pupils who are eligible for FSM than it has in schools with a low proportion.

[^2]Figure 4: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by Index of Multiple Deprivation (2008/09 and 2009/10)

Figure 4 provides a comparison of performance of schools on achieving three hours participation in PE/school sport in terms of the schools' Index of Multiple Deprivation (IMD). This shows a relationship between levels of participation in PE/school sport and IMD. Schools in deprived areas are over-represented amongst the lowest performing schools in terms of their participation in PE/school sport and schools in affluent areas are over-represented in high and medium performing schools. This is consistent with previous surveys and in line with variations in levels of participation by FSM. As the chart shows, there have been no changes in the pattern on this measure over the last year.

Figure 5: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by Ethnic Minority background (2008/09 and 2009/10)

Looking at performance of schools on achieving three hours participation in PE/school sport by ethnic minority background (see Figure 5), confirms the patterns we have seen on FSM and IMD. Schools achieving the lowest levels of participation in three hours PE/school sport tend to have a relatively high proportion of children from an ethnic minority background. Conversely those achieving the highest levels of participation tend to have a relatively low proportion of children from an ethnic minority background. This is consistent with previous surveys and there has been very little change since 2008/09.

Figure 6: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by Special Educational Needs (2008/09 and 2009/10)

Continuing this series of analysis, Figure 6 shows the relationship between the proportion of pupils with Special Educational Needs (SEN) and the performance of the school in terms of participation in three hours of PE/school sport. The findings are consistent with patterns previously observed in relation to FSM, IMD and ethnic minority background. In the lowest performing schools there are a higher proportion of pupils with SEN than is the case in higher performing schools. And, in the highest performing schools there are a lower proportion of pupils with SEN.

As noted in relation to FSM, the changes since 2008/09 are associated with a change in the profile of schools between the two survey periods. Since 2008/09 the percentage of schools with a high proportion of pupils with SEN increased by one percentage point from $36 \%$ to $37 \%$, while the percentage of schools with a low proportion of pupils with SEN has decreased by two percentage points from $28 \%$ to $26 \%$. While this represents only a moderate shift, once again the changes shown in Figure 6 are not uniform. Notably, the increases in the percentage of high and medium performing schools with a high proportion of pupils with SEN are above the average national $1 \%$ increase ( $2 \%$ and $3 \%$ respectively). Also, the decrease in the proportion of medium performing schools with a low proportion of pupils with SEN $(3 \%)$ is greater than the average national decrease (2\%). This suggests that performance on the three hour measure has improved at a slightly faster rate in schools with a high proportion of pupils with SEN than it has at schools with a low proportion.

Figure 7: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by school type (2008/09 and 2009/10)

Throughout the survey series, the only analysis by gender which has been possible is a comparison of results for boys only, girls only and mixed schools. This has consistently shown that pupils in boys only schools and mixed schools are more likely to participate in PE and out of hours school sport than is the case for pupils in girls only schools. The latest survey shows that $53 \%$ of boys in boys only schools take part in at least three hours of PE and school sport, compared to just $37 \%$ of girls in girls only schools, and that the gap has remained the same between the last two surveys. However, only a very small proportion (c.5\% of pupils) are taught in single sex schools, and so this information is of limited use. As a result of this, for the first time the 2009/10 survey collected information for girls and boys separately, and Figure 8 shows these results by gender within individual year group and by school type.

Figure 8: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - analysis by gender (2009/10)

The results show that there is a difference between the proportion of girls and boys participating in at least three hours of PE and out of hours school sport and that this difference is apparent across all year groups. Around half (52\%) of girls participated in at least three hours of PE/school sport, compared to $58 \%$ of boys.

In terms of individual year groups the smallest differences by gender were in Years 1 - 7. After Year 7, the gap between the sexes widened as pupils got older, until by Year 11 the difference was 13 percentage points (33\% participation for girls and 46\% for boys). This difference was also apparent in Years 12 and 13.

In terms of school type, there was a gap of four percentage points in participation levels between the sexes in primary schools, five percentage points in special schools, and nine percentage points in secondary schools.

Figure 9: Percentage of pupils who participated in at least three hours of high quality PE and out of hours school sport in a typical week - number of partnerships achieving different participation rates (2008/09 and 2009/10)

Figure 9 shows the number of partnerships achieving different levels of participation in at least three hours of PE and out of hours school sport - and provides comparisons for the last two surveys. The 2009/10 survey shows that a large majority of partnerships (354 out of 450) have participation levels of $50 \%$ or above with nearly half of all partnerships achieving levels between $50-59 \%$. This represents a significant increase since 2008/09 when 231 partnerships achieved $50 \%$ or above. Furthermore, 131 partnerships have participation levels of $60 \%$ or above. Only nine partnerships achieved participation levels below $40 \%$ which represents a significant improvement since 2008/09 when 41 partnerships achieved levels below 40\%. The lowest performing partnership had $27 \%$ of pupils participating in at least three hours of PE and out of hours school sport (the equivalent figure was 20\% in 2008/09).

### 3.1 Curriculum time spent on PE

In addition to information about the numbers of pupils participating in at least three hours of high quality PE and out of hours school sport, schools were also asked to provide information about the total curriculum time (in minutes) that all pupils spend taking part in PE in a typical week. This question has been asked consistently over the seven surveys, and so provides a robust measure of trends over time. The chart below, however, looks firstly at the latest results, analysed by year group and school type.

Figure 10: Total average curriculum time that all pupils in each year group spend taking part in PE in a typical week - analysis by year group and school type (2009/10)

Looking across Years $1-13$, pupils spent an average of 117 minutes taking part in PE in a typical week during the 2008/09 academic year - or 123 minutes across Years 1-11. Rates were similar across Years $1-9$, but were significantly lower in Years 10 and 11, and in Years 12 and 13. Reflecting this, on average, pupils in secondary schools spent 107 minutes in curriculum PE, compared to 127 minutes in primary schools and 145 minutes in special schools.

Figure 11: Total curriculum time that all pupils in each year group spend taking part in PE in a typical week - analysis over time by year group

Figure 11 shows that the improvement which has been observed in each of the surveys has continued in the latest 2009/10 survey. Based on Years $1-11$ (for which consistent data is available), the average number of minutes spent on curriculum PE has increased from 107 minutes in 2004/05 to the current 123 minutes, and in the last year has increased from 121 minutes to 123 minutes. The latest survey shows that in the last year there has been an increase in all year groups, even Years 10 and 11 which had previously shown little or no increase.

The survey provides a measure of the proportion of pupils who have participated in 120 minutes or more per week of curriculum PE. This has traditionally been based purely on questioning about the number of minutes of curriculum PE that all pupils in a particular year group spend on this activity. However, while in any one year group, pupils up to Year 9 will all be participating in the same amount of curriculum PE, from Year 10 onwards, it is likely that pupils in a year group will be doing varying amounts of PE. Therefore for these year groups a question which refers to the amount of time that all pupils in the year group spend on curriculum PE is a demanding standard, as pupils may participate in varying amounts of PE - with some taking part in significant amounts and others very little. As a result of this, in 2008/09 for the first time an additional question was included for Years $10-13$ as follows: where the total amount of time that all pupils took part in curriculum PE was less than 120 minutes, schools were asked to indicate the actual number of pupils who participated in at least 120 minutes of PE in a typical week. From this additional information, we can provide revised results for the proportion of those in Years $10-13$ who participate in at least 120 minutes of curriculum PE each week, for both 2008/09 and 2009/10.

Figure 12 shows the original results - which provides consistency over time.
Figure 13 shows the revised results.

Figure 12: Proportion of pupils participating in 120 minutes or more of curriculum PE per week - analysis over time

Figure 12 shows that the proportion of pupils in Years $1-11$ participating in 120 minutes or more of curriculum PE has increased from $44 \%$ in 2003/04 to $84 \%$ in the latest survey, with a three percentage point increase being achieved in the last year. In each year group from Years $1-6$, the overwhelming majority of pupils ( $92 \%$ or more) participate in at least 120 minutes of curriculum PE. In each of Years 7, 8 and 9 more than four in five pupils participate in at least 120 minutes of curriculum PE. This falls to about half of those in Years 10 and 11, and just one in ten of those in Years 12 and 13.

It should be noted that looking across the seven surveys there have been increases in all year groups in terms of the proportion of pupils participating in at least 120 minutes of curriculum PE. These increases have been most marked in Years 1-6.

Figure 13 shows the revised results, which gives higher figures for Years $10-12$ (Year $10-66 \%$; Year $11-62 \%$; Year $12-25 \%$; Year $13-22 \%$ ). These higher figures result in a slightly increased overall result of $86 \%$ of pupils across Years 1 11 participating in at least 120 minutes of curriculum PE - up by two percentage points on the comparable figure for 2008/09.

Figure 13: Proportion of pupils participating in 120 minutes or more of curriculum PE per week - revised result

Figure 14: Analysis of how three hours of PE and out of hours school sport has been achieved (2009/10)

From Figure 1 we know that 55\% of pupils across Years 1-13 (or 57\% across Years 1-11) participate in at least three hours of PE and out of hours school sport. Figure 14 above shows that for most of those achieving this, that this is done through 'topping up' the curriculum PE with out of hours school sport, rather than through curriculum PE alone. Indeed only 6\% of all those in Years 1-13 achieve three hours through curriculum PE alone, and the survey suggests that in Years $10-13$ there is an even greater reliance on out of hours school sport, as very few pupils have at least three hours of curriculum PE.

### 3.2 Participation in 120 minutes or more of curriculum time PE gender patterns

The new information collected on gender provides us with an opportunity to examine whether there are any differences by gender in the proportion of pupils participating in 120 minutes or more of curriculum PE. This information is presented below, analysed by individual year group and school type.

Figure 15: Total curriculum time that all pupils in each year group spend taking part in PE in a typical week - proportion participating in 120 minutes or more analysis by gender (2009/10)

Overall 78\% of girls in Years 1 - 13 participated in at least 120 minutes of curriculum PE, compared with $80 \%$ of boys, and so the difference is very small (the equivalent figures based just on Years $1-11$ are 83\% for girls, 84\% for boys). Indeed in each of Years $1-6$ there is no difference at all in the proportion of pupils participating in at least 120 minutes of curriculum PE. On entry to secondary school, a difference in participation levels by gender starts. At Year 7 this difference is only two percentage points (89\% of girls participate in at least two hours of curriculum PE, compared to $91 \%$ of boys), rising gradually to reach a four or five percentage point differential in Years 10, 11, 12 and 13.

These subtle patterns by year group mean that overall in secondary schools $62 \%$ of girls participate in at least 120 minutes of curriculum PE, compared to $66 \%$ of boys, while in both primary and special schools there is no difference at all.

## 4. Participation in intra and inter-school competitive activities

All seven surveys in the series have collected information on competitive sporting activities - covering both intra and inter school competition. Over time the number of such questions has increased to reflect the growing importance of this issue.

### 4.1 Intra-school competitive activities

Two questions were asked about intra-school competitive activities (i.e. within the school):

- The first replicated a question that had been used for the previous three years, and asked about the number of pupils involved in intra-school competitive activities during the academic year (excluding sports days, which are covered in a separate question).
- The second question, which was introduced in the 2008/09 survey, asked about regular participation in intra-school competition to provide a more ambitious measure of levels of participation.

Figure 16: Percentage of pupils involved in intra-school competitive activities during this academic year - analysis over time

The 2009/10 survey reveals that over the last year there has been a very large increase in the proportion of pupils participating in intra-school competitive activities up from $69 \%$ in 2008/09 to $78 \%$ in 2009/10 (based on Years 1 - 11). This represents a continuation of the trend that started in 2006/07 when the question was introduced, and now means that over a period of four years participation in intra-school competition has increased by 20 percentage points from a baseline of $58 \%$. It should also be noted that, based on Years $1-13$, the comparable figure for $2009 / 10$ is $75 \%$.

Figures 17 and 18 show how levels of participation in intra-school competition vary by year group and gender. Trend data is available for year group, but not for gender.

The data shows that the very large improvement noted at the total level has been brought about by increases in each and every year group over the last year, with the very largest increase of fourteen percentage points being observed in Year 1. It is particularly pleasing to note that Years 7-11, which previously recorded only modest increases between 2007/08 and 2008/09, have this year shown much larger increases.

Analysis by gender shows that there is some difference in levels of participation in intra-school competition between boys and girls: 77\% of boys had participated during the academic year, compared to $73 \%$ of girls. This difference is not apparent at all (see Figure 18) in Year 1 ( $70 \%$ of both girls and boys participate in intra-school competition), and in each of Years $2-6$ there is only a one or two percentage point difference. However, by Year 10 this difference has risen to five percentage points ( $67 \%$ v. $72 \%$ ) and at Years 11 ( $53 \%$ v. $60 \%$ ), 12 ( $21 \%$ v. $32 \%$ ) and 13 ( $18 \%$ v. 29\%) it is much higher than this.

Figure 17: Percentage of pupils involved in intra-school competitive activities during this academic year - analysis by year group (2007/08-2009/10)

Figure 18: Percentage of pupils involved in intra-school competitive activities during this academic year - analysis by year group and gender (2009/10)

Regular intra-school competition was defined as 3 times or more during the academic year for Key Stage 2, and 12 times or more for Key Stages 3 and 4 (note that schools were not asked to supply data for Years 1 and 2).

Figure 19 shows that, like participation in intra-school competition in general, regular participation has also increased very substantially over the last year. More specifically it has increased from $28 \%$ among Years $3-13$ in 2008/09 up to $39 \%$ in the latest survey. This increase has been driven by very large increases in Years 3 6, and good increases, although more modest, in Years 7-11.

As with general participation in intra-school competition, boys (41\%) were slightly more likely than girls (36\%) to be regularly taking part in intra-school competition. This difference is apparent in all year groups, but tends to increase as pupils grow older. For example, in Year 3 there is a difference of two percentage points between girls and boys ( $46 \%$ v. 48\%); by Year 6 this has increased to a four percentage point difference ( $58 \%$ v. $62 \%$ ); and by Year 13 it stands at six percentage points ( $5 \% \mathrm{v}$. 11\%).

Figure 19: Percentage of pupils who regularly participated in intra-school competition during the academic year

Figure 20: Percentage of pupils who regularly participated in intra-school competition during the academic year - analysis by year group and gender (2009/10)

Base: All pupils in Years 3-13 where information given (2008/09: 5,472,339-2009/10: 5,443,332)

### 4.2 Sports Days

As in the previous surveys, the latest research shows that $99 \%$ of schools once again held at least one sports day or equivalent event during the academic year. $99 \%$ of primary schools reported having a sports day, $98 \%$ of secondary schools and $96 \%$ of special schools.

### 4.3 Inter-school competition

In a similar manner to the questions on intra-school competition, the survey also included two questions on inter-school competition (ie. between schools).

Figure 21: Percentage of pupils involved in inter-school competitive activities during this academic year - analysis over time

The latest survey data reveal that half (49\%) of pupils across Years 1 - 11 (47\% across Years $1-13$ ) participated in inter-school competition during the academic year. This continues the upwards trend, with a five percentage point increase in the last year, and a 14 percentage point increase over the last four years.

Figure 22: Percentage of pupils involved in inter-school competitive activities during this academic year - analysis by year group (2007/08-2009/10)

An analysis of the information on inter-school competition by year group shows that participation gradually increases year on year until it peaks at $70 \%$ in Year 6. It then declines year on year until it reaches a low point in Year 13 at 17\%.

Over the last year, increases have been achieved for almost all year groups on this measure of participation in inter-school competition. These increases are particularly noteworthy in Year 1 (up from 37\% to 48\%), Year 2 (up from 48\% to 57\%), Year 3 (up from $45 \%$ to $54 \%$ ), Year 4 (up from $53 \%$ to 61\%), Year 5 (up from 58\% to 64\%) and Year 6 (up from $65 \%$ to $70 \%$ ). Increases in Key Stages 3 and 4 were much smaller.

Figure 23: Percentage of pupils involved in inter-school competitive activities during this academic year - analysis by year group and gender (2009/10)

In terms of gender, there is some difference in participation levels in inter-school competition between girls and boys. Half (50\%) of boys participated in inter-school competition in the last year, compared to $44 \%$ of girls.

As was the case with intra-school competition, the difference in participation levels in inter-school competition between girls and boys is not apparent at all at Year 1 (both at $48 \%$ ), and it only really becomes apparent at Year 4 ( $60 \% \mathrm{v} .62 \%$ ). It then increases year on year until it reaches a large difference at Years 10 ( $28 \% \mathrm{v} .38 \%$ ), 11 ( $21 \%$ v. $32 \%$ ), 12 ( $11 \%$ v. 24\%) and 13 ( $10 \%$ v. 24\%).

Turning now to regular inter-school competition, this was defined as 3 times or more during the year for Key Stage 2, and 9 times or more for Key Stages 3 and 4 (the question was not asked of Years 1 and 2).

Figure 24: Percentage of pupils who regularly participated in inter-school competition during the academic year

Around one in five (21\%) of pupils across Years 3-13 regularly participated in interschool competition during the 2009/10 academic year. This represents a small increase over the 2008/09 survey when 19\% of Year 3-13 pupils regularly participated. This improvement has been driven by increases in Years $3-6$, while in Key Stages 3 and 4 there have been no perceptible changes. Consistent with other questions, boys ( $25 \%$ ) were more likely than girls (18\%) to regularly take part in interschool competition (See Figure 25). This difference is perceptible from Year 4 (23\% v. $20 \%$ ) and becomes increasingly noticeable as pupils grow older.

Figure 25: Percentage of pupils who regularly participated in inter-school competition during the academic year - analysis by year group and gender (2009/10)

## 5. Sports provision

Since the first survey in 2003/04, schools have been asked to indicate from a list which of a range of sports they provide. This year, for the first time, schools were asked to indicate which sports they offered for girls and which for boys.

Looking first at sports provided for both girls and boys, schools provided an average of 19.0 of the listed sports. This represents a small increase over the 18.6 sports recorded in the 2008/09 survey. In terms of school type, the latest survey shows that an average of 25.6 sports are provided in secondary schools, 17.6 in primary schools, and 21.5 in special schools. There was no difference in the number of sports provided in areas of different levels of deprivation of the country - those living in more affluent areas had access to the same number of sports as did those living in deprived areas. This was also the case for schools with a high proportion of pupils with an ethnic minority background v. those with a low proportion; schools with a high proportion of children with a Special Educational Need (SEN) v. those with a low proportion; and also for rural v. urban areas. In terms of region, there were some very minor differences, with the average number of sports in the South East being slightly lower than in the North East.

| Kabaddi | * | 1 | 1 | 1 | 1 | 2 | 2 |

Base: All schools (2003/04-6,574: 2004/05-11,498: 2005/6-16,898: 2006/07-21,745: 2007/08-21,631: 2008/09-21,464: 2009/10-21,436) $\dagger$ surveys prior to 2006/07 did not include 'tag rugby' in definition

[^3]Figure 26 shows the proportion of schools providing each of the listed sports, and includes trends from all seven surveys. Football heads the list once again. Any changes in the proportion of schools providing a particular sport are generally small (usually a percent or two), but of particular note is the increase in the provision of cycling (up from $50 \%$ in 2008/09 to $55 \%$ in 2009/10) and judo (up from 1\% to 13\%). Looking at the longer term, many sports have shown dramatic increases over the last seven years - the following have all shown increases of at least ten percentage points over the last seven years:

- Tennis (up from $70 \%$ in 2003/04 to $80 \%$ in 2009/10)
- Multi-skill clubs (up from $26 \%$ to $76 \%$ )
- Fitness (58\% to 71\%)
- Orienteering ( $46 \%$ to $59 \%$ )
- Cycling ( $21 \%$ to $55 \%$ )
- Golf ( $14 \%$ to $44 \%$ )
- Badminton ( $31 \%$ to $41 \%$ )
- Table tennis (26\% to $36 \%$ )
- Rugby league ( $12 \%$ to $35 \%$ )
- Canoeing ( $17 \%$ to $29 \%$ )
- Archery ( $7 \%$ to $27 \%$ )
- Martial arts (4\% to 15\%)
- Rowing (2\% to 12\%).

In terms of gender, on average, an equal number of sports were available to both boys and girls. This was true both at a primary and a secondary level. However, while at a primary level there are no differences at all in terms of the sports available to boys and girls, at a secondary level there are a number of differences which are masked by the fact that the overall number of sports offered is the same - i.e. girls in secondary schools are more likely than boys to be offered some sports, and boys are more likely than girls to be offered other sports.

Figure 27 shows an analysis of the sports offered in both primary and secondary schools. For secondary schools the table also shows those sports which are offered to boys and those which are offered to girls.

There are large differences between primary and secondary schools in terms of the provision for some sports. Swimming, multi-skill clubs and cycling are much more common in primary schools than in secondary schools. In contrast, there are a very large number of sports that are much more commonly offered by secondary schools than by primary schools - rounders, netball, hockey, fitness, basketball, rugby union, orienteering, golf, badminton, table tennis, volleyball, canoeing, softball, martial arts, mountaineering, sailing, boccia, rowing, boxing, squash, lacrosse, cheerleading, trampolining, yoga, handball, baseball and equestrian all fall into this category.

In terms of sports offered to girls as opposed to boys at a secondary level (and vice versa), the key differences are as follows:

## Sports more likely to be offered to girls than to boys in secondary schools:

- Dance ( $97 \%$ v. $86 \%$ )
- Gymnastics (92\% v. 89\%)
- Rounders (97\% v. 85\%)
- Netball (96\% v. 58\%)
- Hockey (82\% v. 78\%)
- Trampolining ( $78 \%$ v. 73\%)
- Cheerleading (64\% v. 37\%)
- Yoga (35\% v. 23\%)
- Equestrian (13\% v. 10\%)

## Sports more likely to be offered to boys than to girls in secondary schools:

- Cricket (96\% v. 85\%)
- Basketball (97\% v. 94\%)
- Rugby union (85\% v. 70\%)
- Golf (66\% v. 59\%)
- Rugby league (38\% v. 30\%)
- Table tennis (86\% v. 83\%)
- Softball (73\% v. 57\%)
- Boxing (37\% v. 33\%)
- Baseball (21\% v. 14\%)

Figure 27: Sports and activities provided during this academic year - analysis by school type and gender (2009/10)

## 6. Club links

On average schools indicated that they had links to clubs for 9.1 of the listed sports. This compares favourably to the average of 8.2 clubs recorded in the 2008/09 survey. As in the previous study, the 2009/10 survey found that the average number of clubs was higher in secondary schools (13.8) than in primary (8.3) or special (6.8) schools: all of these figures represent increases on the 2008/09 levels.

Again, as in 2008/09, it is apparent that those schools located in areas of relatively high deprivation and those with a relatively high proportion of children from an ethnic minority background tend to have slightly lower numbers of club links than do other schools. There is also some small regional variation with those schools in the North East, Yorkshire and Humberside and the East of England having relatively high numbers of club links.

Base: All schools (2003/04-6,574: 2004/05-11,498: 2005/6-16,898: 2006/07-21,745: 2007/08-21,631: 2008/09-21,464 : $2009 / 10-21,436) \dagger$ surveys prior to $2006 / 07$ did not include 'tag rugby' in definition

[^4]Figure 28 shows the proportion of schools with links to clubs, presenting data for all seven surveys (note that the additional sports added in 2007/08 and 2008/09 are not included). It shows that football, cricket, dance, rugby union, swimming, athletics and tennis have consistently featured at the top of the list. The main increases in club links over the last year have been for:

- Dance (up from $50 \%$ to $55 \%$ )
- Swimming ( $46 \%$ to $51 \%$ )
- Tennis ( $42 \%$ to $47 \%$ )

There were no significant decreases in club links for specific sports either since 2008/09 or since the first survey 2003/04.

## 7. Community sports and multi-skill clubs

The survey provides a measure of the proportion of pupils who have participated in community sports, dance or multi-skill clubs with links to the school during the academic year. There has been a question on this issue in all seven of the surveys in the series, although the definition of which year groups are asked the question has changed over time ${ }^{7}$.

Figure 29: Percentage of pupils participating in one or more community sports, dance or multi-skill clubs with links to the school during this academic year analysis over time

The 2008/09 results appeared to show that progress on this measure had stalled at around $30 \%$. However the latest information suggests otherwise and shows a healthy increase of two percentage points on the 2008/09 findings. This now means that over the last seven years there has been an increase from $19 \%$ of pupils in Years 2 - 11 participating in community sports, dance or multi-skill clubs with links to their school, up to the current $33 \%$.

Looking more widely at Years $2-13$, the 2009/10 surveys shows that $32 \%$ of these pupils took part in community sports, dance and multi-skill clubs - up from $30 \%$ in the previous year when the new question definition was introduced.

Figure 30 shows the results for the last three years by individual year group. It shows that participation in community sports, dance or multi-skill clubs increases as children progress through their primary years, peaking at Years 5 and 6 . It then drops sharply on entry to Key Stage 3, and declines each and every year after that.

[^5]However, encouragingly, the latest survey shows that since the 2008/09 survey progress has been made (albeit often very small) in every year group.

Figure 30: Percentage of pupils participating in one or more community sports, dance or multi-skill clubs with links to the school during this academic year analysis by year group

It should be noted that information was not collected separately for girls and boys on this question, due to the potential complexity of collecting this data, and the additional burden that this would place on schools.

## 8. Gifted and talented pupils

Schools were asked to provide the numbers of pupils who are currently registered as gifted and talented because of their ability in PE and/or school sport. Responses were collected for Years $5-13$, as before this it is difficult to identify pupils in this way. Trend data, however, are only available for Years $5-11$, as shown below.

Figure 31: Percentage of pupils registered as gifted and talented because of their ability in PE and/or school sport - analysis over time

During the 2009/10 academic year, $8 \%$ of pupils across Years $5-11$ were registered as gifted and talented because of their ability in PE and/or school sport (extending the coverage to include Years 5-13 also results in a figure of $8 \%$ registration). This is a slight increase over the levels recorded in the last three surveys, and means that since the start of survey series levels of registration have nearly tripled from $3 \%$ to 8\%.

Figure 32: Percentage of pupils currently registered as gifted and talented because of their ability in PE and/or school sport - analysis by gender within year group and school type (2009/10)

The 2009/10 survey provides the opportunity to evaluate whether there are differences in numbers of registrations between girls and boys. Figure 32 shows the relevant data by gender within year group and school type. In general registrations are lower in Years 12 and 13, and reflecting this they are lower in secondary schools than in primary schools (they are also lower in special schools). However, in terms of gender, there is very little difference in terms of numbers of registrations - overall 7\% of girls in Years 5-13 are registered compared to 8\% of boys. This small difference exists in all year groups although it is slightly more exaggerated in Years 5 and 6, and then again in Years 11, 12 and 13. The difference by gender is also slightly more pronounced in primary schools compared with secondary and special schools.

This section looks at the final question from the main survey, namely the number of pupils who are actively involved in sports volunteering and leadership during the academic year.

Since the 2007/08 survey, this question has covered all Years (1-13). Prior to this, the question focused on a smaller range of year groups. As shown in Figure 33, trend data are therefore only presented for the last three surveys. However, we are able to track this measure over all seven surveys for Years 10-13.

Figure 33: Percentage of pupils actively involved in sports volunteering and leadership this academic year - analysis by year group and school type (2007/08-2009/10)

Since the 2008/09 survey, the proportion of pupils from Years $1-13$ who have been actively involved in sports volunteering and leadership during the academic year has increased from $19 \%$ to $24 \%$. This increase is substantially higher than the three percent increase observed between 2007/08 and 2008/09.

As observed in previous years, involvement varied by year group, with those in Years 5,6 and 10 being the most likely to be involved. Consistent with the overall increase in involvement, since 2008/09, increases can be observed for every year group (Years 1-13). The largest increases can be seen for Years 5, 6, 7, 8 and 9.

Figure 34: Percentage of pupils actively involved in sports volunteering and leadership this academic year - analysis by gender within year group and school type (2009/10)

Active involvement in sports volunteering and leadership during the academic year varied by gender with girls being marginally more likely to have been involved (25\% compared with $23 \%$ across Years $1-13$ ). As we might expect this difference varies by year group and is at its largest for Years 5 and 6. Conversely, in Years 12 and 13, boys are more likely to have been involved in sports volunteering and leadership during the academic year than girls. These differences by year group are reflected in the variation between primary and secondary schools.

Figure 35: Percentage of pupils actively involved in sports volunteering and leadership this academic year - analysis over time (Years 10-13 only)

As discussed it is also possible to look at longer-term trends for Years 10 to13 (presented in Figure 35). Since the start of the survey series in 2003/04, levels of involvement in volunteering and leadership have increased consistently, year on year. Starting at just $9 \%$ in 2003/04, levels of involvement have increased to $25 \%$ in the latest survey based on these year groups. There has been an increase of three percentage points on this measure since 2008/09.

Figure 36: Percentage of pupils actively involved in sports volunteering and leadership this academic year - analysis by region (Years 1-13-2009/10)

As shown in Figure 36, there are some interesting variations in active involvement in sports volunteering and leadership by region. Involvement levels are highest in the East, the North West, London, Yorkshire and Humberside and the North East (all of which have involvement levels of $25 \%$ or above).

Despite these regional variations, the overall increase in levels of active involvement in sports volunteering and leadership since 2008/09 can be observed in all regions with increases of at least four percent in each and every region. The largest increases can be seen in London and the North West. In all regions 20\% or more of all pupils in Years 1-13 were reported to have been actively involved in sports volunteering and leadership in the last academic year.

## 10. Summary of gender patterns in participation in PE and school sport

As has already been stated, the 2009/10 survey provided for the first time separate data on girls' and boys' participation in PE and school sport. These differences have been highlighted throughout this report. In this chapter, however, we draw together the key findings from this new element of the survey. The measures on gender are summarised in the table below.

Figure 37: Summary of gender patterns

|  |  | Total |  | Primary |  | Secondary |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Base sizes | Girls | Boys | Girls | Boys | Girls | Boys |
| \% of pupils who participate in at <br> least 3 hours of PE and out of <br> hours school sport (Years 1-13) | $6,565,106$ | 52 | 58 | 62 | 66 | 41 | 50 |
| \% of pupils who participate in at <br> least 120 minutes of curriculum <br> PE (Years 1-13) | $6,565,106$ | 78 | 80 | 94 | 94 | 62 | 66 |
| \% of pupils involved in intra- <br> school competitive activities in <br> the academic year (Years 1-13) | $6,565,106$ | 73 | 77 | 80 | 81 | 67 | 72 |
| \% of pupils regularly involved in <br> intra-school competitive activities <br> (Years 3-13) | $5,443,332$ | 36 | 41 | 53 | 56 | 26 | 32 |
| \% of pupils involved in inter- <br> school competitive activities in <br> the academic year (Years 1-13) | $6,565,106$ | 44 | 50 | 58 | 60 | 30 | 40 |
| \% of pupils regularly involved in <br> inter-school competitive activities <br> (Years 3-13) | $5,443,332$ | 18 | 25 | 26 | 30 | 14 | 21 |
| \% of pupils registered as gifted <br> and talented because of ability in <br> PE/school sport (Years 5-13) | $4,372,894$ | 7 | 8 | 8 | 10 | 7 | 8 |
| \% of pupils involved in sport <br> volunteering and leadership <br> (Years 1-13) | $6,565,106$ | 25 | 23 | 24 | 22 | 25 | 25 |
| Average number of sports <br> provided in schools | 21,436 | 18.7 | 18.6 | 17.5 | 17.4 | 24.5 | 24.1 |

From the table above, it is clear that despite having access to the same number and variety of sports, girls are slightly less likely than boys to participate in PE and sport. This is apparent - to a lesser or greater extent - in all of the survey measures.

However, an analysis of the information by primary v. secondary reveals a more complex pattern. It shows that the differences between the genders are much less marked in primary schools than in secondary schools. Indeed at primary level girls are (just about) as likely as boys to participate in 120 minutes of curriculum PE; to take part in intra-school competitive activities; to take part in inter-school competitive activities; to be registered as gifted and talented because of their ability in PE/school sport; and to be involved in sport volunteering and leadership. However, it is interesting and important to note that even at primary level girls are less likely than
boys to participate in at least three hours of PE and out of hours school sport. This difference is apparent (albeit in a small way) at Year 1 (see Figure 8) where 55\% of girls take part in at least three hours, compared to $58 \%$ of boys, and it becomes more and more exaggerated as pupils become older.

At secondary level there are quite large differences between the sexes on most of the survey measures - with the exceptions of the proportion of pupils who are registered as gifted and talented, and the proportion who take part in sport volunteering and leadership. However, on participation in at least 3 hours of PE and out of hours school sport; participation in 120 minutes of curriculum PE; taking part in intra-school competitive activities (both regularly or in the last year); and taking part in inter-school competitive activities (both regularly or in the last year), it is clear that boys are much more likely to be involved than are girls. It is also the case that these differences tend to increase as pupils progress though Key Stages 3 and 4.

## 11. Further Education

The Further Education Sport Co-ordinators (FESCos) element of the survey was introduced in 2008/09, and was repeated in the 2009/10 survey. This part of the study aimed to provide some general feedback on Further Education (FE) colleges and how the strategy was being implemented in these.

Please note that all the results presented in this chapter relate to 16 - 19 year old FE students, studying full-time. ${ }^{8}$ Also note that FE colleges are generally large, with students working on hugely varying timetables. Because of this it was not possible to include questions about total numbers of students participating in set amounts of sport, as the infrastructure is not available to collect this information.

### 11.1 Sporting events and activities organised

Figure 38: Number of sporting events/activities organised at FE college during academic year

FESCos were asked to indicate the numbers of sporting events and activities which they had organised during the academic year, using a number of different categories. Overall, FESCos reported that they had organised an average of 154 events - up from 92 events in the previous academic year. The largest proportion of these events were participation sessions/clubs - of which FESCos had organised an average of 94 , up from 57 in the previous year. British College of Sports events, other local leagues/competitions, and one-off festivals/events also showed considerable increases in the numbers organised when compared to the 2008/09

[^6]results. Other national leagues/competitions showed the smallest growth in numbers organised (five up from four in 2008/09), with two in five FESCos not organising any of these events. As was the case in 2008/09, medium sized and larger colleges (with 1,300 or more full-time students aged $16-19$ ) once again tended to organise more events.

### 11.2 Sports participation

FESCos estimated that 23\% of all full-time pupils aged $16-19$ had taken part in at least one of the sporting events that they had organised during the academic year. This represents an increase of seven percentage points on the figure reported in the 2008/09 survey. In smaller colleges (with less than 1,300 full-time students aged 16 - 19) reported participation levels were higher at 31\%, while in the largest colleges (with 2,100 students or more) reported levels of participation were lower at $19 \%$. These patterns mirror those observed in the 2008/09 survey.

As shown in Figure 39 below, FESCos indicated that, on average, 12\% of students had taken part in intra-college competitive activities during the academic year. This represents a substantial increase over the 7\% reported in the 2008/09 survey. Furthermore 5\% of students regularly participated in such events (defined as 12 times or more during the year) - up from 3\% in the previous survey.

There was also an increase in the proportion of students who had participated in inter-college competitive activities, although the increase was not as marked as for intra-college activities. Specifically 7\% participated in inter-college events, representing an increase of two percentage points over the 2008/09 figures. Again those in the largest colleges were less likely to have participated (5\%). FESCos indicated that 5\% of students regularly took part in inter-college activities (defined as 9 times or more during the year).

Figure 39: Percentage of FE students who participated in sporting activities during academic year

### 11.3 Sports provision and club links

FESCos were asked to provide information on the sports and activities that were provided by the college during the academic year - distinguishing between those provided on the college site and those provided elsewhere. They were also asked to indicate for which sports they had links to clubs.

Base: All colleges with full-time FE pupils where information given (2008/09-352; 2009/10-355)
Colleges provided an average of 19.3 of the listed sports, which represents an average increase of just over 3 sports per college when compared to the 2008/09 results. Smaller colleges had slightly fewer sports available at 17.1.

The most commonly available sports were football, basketball, fitness, badminton, dance, table tennis and netball. Large increases in availability were recorded for
many of the sports, but the following all recorded increases of more than ten percentage points when compared to the 2008/09 survey:

- Volleyball increased from $53 \%$ to $65 \%$
- Outdoors and adventurous activities increased from 51\% to 66\%
- Rounders increased from $43 \%$ to $54 \%$
- Swimming increased from $42 \%$ to $56 \%$
- Yoga increased from $39 \%$ to $54 \%$
- Martial arts increased from $34 \%$ to $48 \%$
- Canoeing increased from $29 \%$ to $37 \%$
- Boxing increased from $28 \%$ to $43 \%$
- Squash increased from $21 \%$ to $32 \%$
- Boccia increased from $17 \%$ to $28 \%$
- Rowing increased from $16 \%$ to $30 \%$

No sports displayed a decrease in availability.
Out of the average of 19.3 sports provided in each college, 12.7 were provided on site. This compares to 10.4 sports being provided on site in the 2008/09 survey. Dance, fitness, football, basketball, badminton, and table tennis were again the most widely available sports on site. As with general provision, many of the sports showed increases in availability on site when compared to the 2008/09 survey - in particular the following achieved increases of eight percentage points or more:

- Dance - up from $76 \%$ to $84 \%$
- Table tennis - up from $65 \%$ to $74 \%$
- Netball - up from $57 \%$ to $65 \%$
- Volleyball - up from $47 \%$ to $55 \%$
- Yoga - up from $36 \%$ to $50 \%$
- Cricket - up from $37 \%$ to $47 \%$
- Rounders - up from $32 \%$ to $46 \%$
- Martial arts - up from $28 \%$ to $41 \%$
- Boxing - up from $22 \%$ to $32 \%$
- Boccia - up from $14 \%$ to $25 \%$
- Rowing - up from $9 \%$ to $22 \%$

Colleges had links to an average of 9.4 different clubs, compared to 7.4 clubs in the 2008/09 survey. The largest increases in terms of club links (all of eight percentage points of more) were for:

- Basketball - up from $49 \%$ to $64 \%$
- Cricket - up from $32 \%$ to $46 \%$
- Dance - up from $32 \%$ to $41 \%$
- Badminton - up from $23 \%$ to $36 \%$
- Martial arts - up from $20 \%$ to $35 \%$
- Tennis - up from $23 \%$ to $31 \%$
- Boxing - up from $19 \%$ to $30 \%$

It is possible to compare these findings with the number of sports available in secondary schools (as measured by the main school survey). Overall the figures for FE colleges are much lower. Secondary schools have an average of 25.6 listed sports available and have links to an average of 13.8 different clubs.

Figure 41: Numbers of local schools/educational institutions college has sports related links with

During the 2009/10 academic year, colleges had sports related links to an average of 37 different schools/educational establishments, which represents a very large increase on the average of 25 recorded in the previous 2008/09 study.

The 37 links were, on average, made up of 15 primary schools, 11 FE colleges, 7 secondary schools, 2 special schools and 2 HE institutions. All of these have shown increases in the last year - thereby driving the increase in total average number. In $2009 / 10$, only $1 \%$ of colleges had no such sporting links, and $81 \%$ of colleges had more than ten.

### 11.4 Sports volunteering and leadership

The survey estimates that $4 \%$ of full-time students aged 16 - 19 are actively involved in sports volunteering, an increase of one percentage point over the 2008/09 figure. This compares with 15\% of pupils in Years 12-13 being involved in sports volunteering and leadership, as recorded in the schools survey.

## 12. Conclusions

This is the seventh in the series of PE and sport surveys which have been conducted annually since 2003/04 in schools across England. The surveys have provided a valuable means of tracking changes in participation in PE and sport in schools (and more recently FE colleges) across the country. It is clear that considerable progress has been made across the seven year period, and that this progress has taken place bit by bit, year by year. Indeed the results of the seven surveys are very unusual in that on almost all measures there have been improvements each and every time the survey has been conducted.

The 2008/09 survey laid down a new baseline for participation in three hours of PE and out of hours school sport - prior to that the research had looked at two hours. The latest results show there has been an increase of five percentage points on this baseline, with participation in three hours of PE and out of hours school sport now standing at $55 \%$ of pupils in maintained schools across England. There is, however, still scope for improvement on this measure (participation in two hours of PE and out of hours school sport was first measured in 2003/04 at 62\% and rose over a five year period to $90 \%$ in 2007/08) and it will be important to continue to monitor it in the future.

All seven surveys have collected information on competitive activities - at both an intra- and inter-school level. A major finding from this year's survey has been the very considerable increase in intra- school competition, up from $69 \%$ across Years 1 - 11 in 2008/09 to the current level of $78 \%$. This increase is also apparent in the FE survey. This represents very considerable progress, which has also been echoed in the big increase in regular participation in intra-school competition (up from $28 \%$ in 2008/09 among Years $3-13$ to 39\%). There was also an increase (though smaller) in levels of inter-school competition.

Over the seven years the surveys have provided insight into the variations in patterns of participation by year group. As a broad statement, participation levels tend to be highest in Years 1-6, and this is also where the most progress has been made. On entry to Key Stage 3, participation starts to decline, and although considerable progress has been made in both Key Stage 3 and Key Stage 4, take up here remains lower. In particular the widening of the survey in 2008/09 to encompass Years 12 and 13 highlighted the much lower levels of participation among this group.

The collection of information on differences between the sexes in terms of participation in PE and school sport has added a new dimension to the survey. It has shown that on the whole, boys score more highly on most (but not all) of the survey measures, and that this difference between the sexes really starts to show on entry to Key Stage 3, and becomes more exaggerated as pupils progress through Key Stage 3 into Key Stage 4. However, on the key measure of participation in at least three hours of PE and school sport, the difference in the sexes is apparent even in Year 1, although at this stage it is only quite small.

There is an exception to the general rule that boys score more highly on the survey measures than do girls. Specifically, girls are marginally more likely than boys to be actively involved in sports volunteering and leadership.

The 2009/10 data on differences between the sexes gives us a baseline on this issue, which will allow partnerships to understand how they compare to other partnerships on this issue.

The FE element of the study was introduced in 2008/09 and while of necessity the scope of it is more limited (precise information on levels of student participation are not provided through this source), it has nonetheless yielded useful data which the 2009/10 study has tracked. The latest survey results highlighted a large number of improvements on many of the FE measures. The numbers of events organised has increased very substantially (from an average of 92 in 2008/09 to 154 in 2009/10); FESCos' estimates of the proportion of full-time students aged 16-19 who have taken part in events they have organised have increased from $16 \%$ to $23 \%$ over a period of one year; and intra-college activity has also increased substantially.

## Annual PE and Sport Survey 2009/ 10

The purpose of this survey is to help you, your partnership and the Government to evaluate progress towards meeting the aims of the national PE and Sport Strategy for Young People.

We would like you to complete the questionnaire online at www.tnsinfo.com/sportsurvey. A paper copy has been provided to help you collect answers for each question but unless your PDM has given you different instructions, your questionnaire must be submitted online this year.

This year, many questions ask for the number of boys and girls separately. This change reflects an important policy need to measure any differences in the uptake of PE and school sport between girls and boys. This will help schools and partnerships to assess their strengths and weaknesses and address any gender issues.

To help you collect data by gender we have developed a data collection spreadsheet that you can download from the survey website: www.tnsinfo.com/sportsurvey

A guide to the survey has been produced to help you understand the questions and complete the questionnaire. The guide provides definitions for the key terms used in the questions and other useful information. You should have received a copy of the guide but if do not have it, you can get a copy from the survey website. We hope you find completing the survey straightforward.

## Your School URN:

Your Partnership number:

School name and address:

Contact name (for queries): $\square$
Telephone number (for queries): $\square$

## I MPORTANT DATES

You must submit your data on the website by $\mathbf{1}^{\text {st }}$ July 2010

## About your school

In order to be able to report accurately on the information you provide, we need current and accurate information about the number of pupils in each year group by gender in your school.
Please provide this information below.
How many pupils do you have in each year group?
Enter total number of pupils per year group by gender.
(put 0 if none, do not leave cells blank)

| GI | BO |
| :---: | :---: |
| Year 1 | Year 1 |
| Year 2 | Year 2 |
| Year 3 | Year 3 |
| Year 4 | Year 4 |
| Year 5 | Year 5 |
| Year 6 | Year 6 |
| Year 7 | Year 7 |
| Year 8 | Year 8 |
| Year 9 | Year 9 |
| Year 10 | Year 10 |
| Year 11 | Year 11 |
| Year 12 | Year 12 |
| Year 13 | Year 13 |

## Question 1

What is the total curriculum time in minutes that ALL pupils in each year group spend taking part in PE* in a typical week?
Enter total curriculum time in minutes by gender (put 0 if none, leave cells blank if there are no pupils in that year group)

* Definition of 'PE': The planned teaching and learning programme in curriculum time that meets the requirements of the national curriculum for physical education.

## Schools with students in Years 10, 11, 12 and $13 \rightarrow$ go to Q1b All others go to Q2

Question 1b
For Year groups 10-13 where the total curriculum time at Q. 1 was less than 120 minutes, what is the total number of pupils by gender in each year group who participate in at least $\mathbf{1 2 0}$ minutes of PE in a typical week?
Note: Please include curriculum time (theory and practical) for related GCSEs/A-levels/BTECs or other relevant qualifications

Enter total number of pupils per year group by gender
(put 0 if none, leave cells blank if there are no pupils in that year group)

## Question 2

## What is the total number of pupils in each year group who participate in at least three hours of high quality PE and out of hours school sport* in a typical week?

Note: The three hours can come from any combination of curriculum PE and out of hours school sport. Enter total number of pupils per year group by gender (put 0 if none, leave cells blank if there are no pupils in that year group)

* Definition of 'school sport': Any activity that requires physical skilfulness and is part of the school's planned formal, semi-formal, supervised or led provision. School sport typically takes place out of hours and/or at lunch or break times.
Definition of 'high-quality': This produces young people with the skills, understanding, desire and commitment to continue to improve and achieve in a range of PE, sport and health-enhancing physical activities, in line with their abilities, as set out in the 'High Quality PE and Sport for Young People' guide.

## - TIPS ON ANSWERING QUESTI ON 2

- If your answer to Question $\mathbf{1}$ is equal to or more than $\mathbf{1 8 0}$ minutes for any year group, the answer to this question will be the total number of pupils in that year group. In this case, you do not need to calculate time spent on school sport or additional PE.
- If your answer to Question $\mathbf{1}$ is less than $\mathbf{1 8 0}$ minutes for any year group, to answer this question you need to take the following steps.
- Check which pupils have additional time for PE and how much additional time they actually have. This will include lessons that the rest of the year group does not have, for example GCSE PE, GCSE Dance or an extra PE lesson that some pupils have while others study an additional modern foreign language.
- Find out how long each pupil spends taking part in school sport in a typical week.
- Estimate whether each pupil participates in at least three hours of PE and school sport a week, including additional PE and school sport.
- Enter the number of pupils in each year group who participate in at least three hours of PE and school sport in a typical week.

## Question 3

What is the total number of pupils in each year group involved in intraschool competitive activities during this academic year?
Note: School sports days do not count as intra-school competitive activities.
Please refer to the intra-school competitive activities' definition below.
Enter total number of pupils per year group by gender
(put 0 if none, leave cells blank if there are no pupils in that year group)

## I ntra-school competitive activities:

Events in which pupils from the same school compete against each other and all school based extra curricular training and club activities where pupils are preparing and practicing for competition. Common events include interhouse or inter-form tournaments or leagues in sports such as netball, tennis and gymnastics; swimming/aquatic galas; club and team practices where pupils are practicing to take part in inter-school matches; and clubs with open access for games such as badminton and basketball. Intra-school competitive activities do not include clubs without competition, such as aerobics and dance clubs.

Intra-school competitive activities do not include school sports days.

## Question 4

## What is the total number of pupils in each year group that have requiarly participated in competitive intra-school sporting opportunities during this academic year?

Note: Regular intra-school competition is defined as:

- 3 times or more during the academic year for pupils in Key Stage 2
- 12 times or more during the academic year for pupils in Key Stages 3 and 4.

Please only include participation in competition formats that allow for sustained involvement (e.g. leagues, ladders etc.) rather than one-off events which need to be included in question 3. NB: A central venue league counts as one competitive opportunity each time the event is staged.

Enter total number of pupils per year group by gender (put 0 if none, leave cells blank if there are no pupils in that year group)

## Question 5

Did you hold at least one school sports day or equivalent event during this academic year? Please $X$ yes or no
yes$\square$
no $\square$

## Question 6

What is the total number of pupils in each year group who have taken part in inter-school competition during this academic year?

Please refer to the inter-school competitive activities' definition below.
Enter total number of pupils per year group by gender (put 0 if none, leave cells blank if there are no pupils in that year group)

## Inter-school competition

A sporting event or fixture where pupils from two or more schools compete against each other. Pupils are usually selected by their school to compete as individuals or as part of a team. Common examples include matches in sports such as basketball, hockey and cricket; district athletics championships; cross country championships; area swimming/aquatic galas; and 5-a-side football tournaments.

## Question 7

## What is the total number of pupils in each year group that have regularly participated in competitive inter-school sporting opportunities during this academic year?

Note: Regular inter-school competition is defined as:

- 3 times or more during the academic year for pupils in Key Stage 2
- 9 times or more during the academic year for pupils in Key Stages 3 and 4.

Please only include participation in competition formats that allow for sustained involvement (e.g. leagues, ladders etc.) rather than one-off events which need to be included in question 6. NB: A central venue league counts as one competitive opportunity each time the event is staged.

|  |  |  | Other | $\square$ | $\square$ |

If you crossed 'yes' for other, please provide details:
$\square$

* Definition of IIinks': a school has links to clubs when pupils are actively guided towards club activities, either in a quality assured setting at the club itself, or on the school premises. Links with any types of club can be included (community, volunteer, professional clubs).Activities on the school premises would include regular coaching sessions and out-of-hours clubs organised by the club's coaches, but would not include one-
off 'taster' sessions

## Question 10

What is the total number of pupils in each year group who have participated in one or more community sports, dance or multi-skill clubs with links to the school during this academic year?

Enter total number of pupils per year group
(put 0 if none, leave cells blank if there are no pupils in that year group)

## Question 11

What is the total number of pupils in each year group currently registered as gifted and talented because of their ability in PE and/ or school sport?

Enter total number of pupils per year group by gender
(put 0 if none, leave cells blank if there are no pupils in that year group)

## BOYS

$\square$
Year 6 $\square$
Year 7 $\square$
Year 8

Year 9 $\square$
$\square$
Year $11 \square$
Year $12 \square$
Year $13 \square$

## Question 12

What is the total number of pupils in each year group actively involved in sports volunteering and leadership this academic year?

Enter total number of pupils per year group by gender
(put 0 if none, leave cells blank if there are no pupils in that year group)
Please refer to the survey guide in relation to this question.

This questionnaire is important as it provides a record of what your school has achieved. Please now go back and check that you have given a full and accurate answer to ALL questions.

Please read the information below before submitting your results. By submitting a response you agree to and confirm the following:

- The information I have provided is, to the best of my knowledge, accurate and up to date.
- $\quad$ Responses are verifiable and I understand that I may be asked by a representative from TNS-BMRB to provide evidence to support these responses.
- $\quad$ The information I have provided may be used for the purposes of calculating eligibility for Sportsmark.

If you wish to amend any of your answers please do so now before submitting your results.
If your PDM has asked you to return this paper questionnaire to them, please print your name and position and sign and date below to indicate that you agree with the above.

Name: $\qquad$
Position: $\qquad$
Date: $\qquad$

## Further Education PE and Sport Survey 2009/ 10

The purpose of this survey is to help you, your partnership and the Government to evaluate progress towards meeting the aims of the national PE and Sport Strategy for Young People.

We would like you to complete the questionnaire online at:

## www.tnsinfo.com/ sportsurvev

A guide to the survey has been produced to help you understand the questions and complete the questionnaire. The guide provides definitions for the key terms used in the questions and other useful information. You should have received a copy of the guide but if do not have it, you can get a copy from the survey website. We hope you find completing the survey straightforward.

## Your College URN:

Your Partnership number:

College name and address:

## Contact name (for queries):

## Telephone number (for queries):

$\square$

## You must complete this survey online at www.tnsinfo.com/sportsurvey by $1^{\text {st }}$ July 2010

Please note that this survey is about 16-19 year old FE students who are studying fulltime across all sites in your college.

## Question 1

How many full-time students aged 16-19 years do you have in your college?
$\square$

## Question 2

What is the total number of sporting events/ activities that you or someone else has organised/ do you expect to be organised during this academic year?

British Colleges Sport (BCS) events

Other local leagues/ competitions

Other national leagues/ competitions $\square$
One-off festivals/events

Participation sessions/clubs

Other

## Question 3

What is the total number of full-time students aged 16-19 years who have/ will have participated in these sporting events/ activities during this academic year?
Note: If one student participates in more than one event, then they should only be counted once.

## Question 4

What is the total number of full-time students aged 16-19 years involved in intra-college competitive activities during this academic year?

## Question 5

What is the total number of full-time students aged 16-19 years that have regularly* participated in competitive intra-college sporting opportunities during this academic year?
Note: Please only include participation in competition formats such as leagues and ladders that allow for sustained involvement rather than one-off events. However, regular annual or termly events may be included.

1. *Regular intra-college competition is defined as 12 times or more during the academic year.

## Question 6

What is the total number of full-time students aged 16-19 years who have taken part in inter-college sporting competition during this academic year?
$\square$

## Question 7

What is the total number of full-time students aged 16-19 years that have regularly* participated in competitive inter-college sporting opportunities during this academic year?
Note: Please only include participation in competition formats such as leagues and ladders that allow for sustained involvement rather than one-off events. However, regular annual or termly events may be included.

2. *Regular inter-college competition is defined as 9 times or more during the academic year.

## Question 8

Which of the following sports or activities has your college provided this academic year? Please ' $X$ ' all that apply

| Activity | Activities available to students. | Activities offered on the college site |  | Activity | Activities available to students. | Activities offered on the college site |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Yes | No |  |  | Yes | No |
| Angling | $\square$ | $\square$ | $\square$ | Lacrosse | $\square$ | $\square$ | $\square$ |
| Archery | $\square$ | $\square$ | $\square$ | Martial arts (except | $\square$ | $\square$ | $\square$ |
| Athletics (includes |  |  |  | judo and karate) |  |  |  |
| cross-country) |  |  |  | Mountaineering | $\square$ | $\square$ | $\square$ |
| Badminton | $\square$ | $\square$ | $\square$ | Netball | $\square$ | $\square$ | $\square$ |
| Baseball | $\square$ | $\square$ | $\square$ | Orienteering | $\square$ | $\square$ | $\square$ |
| Basketball | $\square$ | $\square$ | $\square$ | Outdoor and |  |  | $\square$ |
| Boccia | $\square$ | $\square$ | $\square$ | adventurous activity |  |  |  |
| Bowls | $\square$ | $\square$ | $\square$ | Rounders | $\square$ | $\square$ | $\square$ |
| Boxing | $\square$ | $\square$ | $\square$ | Rowing | $\square$ | $\square$ | $\square$ |
| Canoeing | $\square$ | $\square$ | $\square$ | Rugby league | $\square$ | $\square$ | $\square$ |
| Cheerleading | $\square$ | $\square$ | $\square$ | (includes tag rugby) |  | $\square$ |  |
| Circus skills | $\square$ | $\square$ | $\square$ | Rugby union | $\square$ | $\square$ | $\square$ |
| Cricket | $\square$ | $\square$ | $\square$ | (includes tag rugby) |  |  |  |
| Cycling | $\square$ | $\square$ | $\square$ | Sailing | $\square$ | $\square$ | $\square$ |
| Dance | $\square$ | $\square$ | $\square$ | Skateboarding | $\square$ | $\square$ | $\square$ |
| Equestrian | $\square$ | $\square$ | $\square$ | Softball | $\square$ | $\square$ | $\square$ |
| Fencing | $\square$ | $\square$ | $\square$ | Squash | $\square$ | $\square$ | $\square$ |
| Fitness | $\square$ | $\square$ | $\square$ | Swimming | $\square$ | $\square$ | $\square$ |
| Football | $\square$ | $\square$ | $\square$ | Table tennis | $\square$ | $\square$ | $\square$ |
| Goalball | $\square$ | $\square$ | $\square$ | Tennis | $\square$ | $\square$ | $\square$ |
| Golf | $\square$ | $\square$ | $\square$ | Trampolining | $\square$ | $\square$ | $\square$ |
| Gymnastics | $\square$ | $\square$ | $\square$ | Triathlon | $\square$ | $\square$ | $\square$ |
| Handball | $\square$ | $\square$ | $\square$ | Volleyball | $\square$ | $\square$ | $\square$ |
| Hockey | $\square$ | $\square$ | $\square$ | Yoga (and related |  |  |  |
| Judo | $\square$ | $\square$ | $\square$ | activities such as | $\square$ | $\square$ | $\square$ |
| Kabaddi | $\square$ | $\square$ | $\square$ | pilates, tai chi) |  |  |  |
| Karate | $\square$ | $\square$ | $\square$ | Other | $\square$ | $\square$ | $\square$ |
| If you crossed 'yes' for other, please provide details: |  |  |  |  |  |  |  |

## Question 9

## For which sports or activities does your college have links* to clubs? Please ' $X$ ' select all that apply

|  | Yes | No |  | Yes | No |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Angling | $\square$ | $\square$ | Kabaddi | $\square$ | $\square$ |
| Archery | $\square$ | $\square$ | Karate | $\square$ | $\square$ |
| Athletics (includes cross-country) | $\square$ | $\square$ | Lacrosse | $\square$ | $\square$ |
| Badminton | $\square$ | $\square$ | Martial arts (except judo and karate) | $\square$ | $\square$ |
| Baseball | $\square$ | $\square$ | Mountaineering | $\square$ | $\square$ |
| Basketball | $\square$ | $\square$ | Netball | $\square$ | $\square$ |
| Boccia | $\square$ | $\square$ | Orienteering | $\square$ | $\square$ |
| Bowls | $\square$ | $\square$ | Outdoor and adventurous activity | $\square$ | $\square$ |
| Boxing | $\square$ | $\square$ | Rounders | $\square$ | $\square$ |
| Canoeing | $\square$ | $\square$ | Rowing | $\square$ | $\square$ |
| Cheerleading | $\square$ | $\square$ | Rugby league (includes tag rugby) | $\square$ | $\square$ |
| Circus skills | $\square$ | $\square$ | Rugby union (includes tag rugby) | $\square$ | $\square$ |
| Cricket | $\square$ | $\square$ | Sailing | $\square$ | $\square$ |
| Cycling | $\square$ | $\square$ | Skateboarding | $\square$ | $\square$ |
| Dance | $\square$ | $\square$ | Softball | $\square$ | $\square$ |
| Equestrian | $\square$ | $\square$ | Squash | $\square$ | $\square$ |
| Fencing | $\square$ | $\square$ | Swimming | $\square$ | $\square$ |
| Fitness | $\square$ | $\square$ | Table tennis | $\square$ | $\square$ |
| Football | $\square$ | $\square$ | Tennis | $\square$ | $\square$ |
| Goalball | $\square$ | $\square$ | Trampolining | $\square$ | $\square$ |
| Golf | $\square$ | $\square$ | Triathlon | $\square$ | $\square$ |
| Gymnastics | $\square$ | $\square$ | Volleyball | $\square$ | $\square$ |
| Handball | $\square$ | $\square$ | Yoga (and related activities such as pilates, tai chi) | $\square$ | $\square$ |
| Hockey | $\square$ | $\square$ |  |  |  |
| Judo | $\square$ | $\square$ | Other | $\square$ | $\square$ |

If you crossed 'yes' for other, please provide details:

[^7]
## Question 10

How many local schools or educational institutions does your college have sports-related links with?

Primary schools $\square$
Secondary schools

Special schools

FE colleges $\square$
HE institutions $\square$

## Question 11

What is the total number of students aged 16-19 years who are/ were actively involved in sports volunteering and leadership related to, organised by or through the college during this academic year?
$\square$

This questionnaire is important as it provides a record of what your school has achieved. Please now go back and check that you have given a full and accurate answer to ALL questions.

Please read the information below before submitting your results. By submitting a response you agree to and confirm the following:

- The information I have provided is, to the best of my knowledge, accurate and up to date.
- $\quad$ Responses are verifiable and I understand that I may be asked by a representative from TNS-BMRB to provide evidence to support these responses.

If you wish to amend any of your answers please do so now before submitting your results.

Please ensure you complete your questionnaire online by 1st J uly 2010.
If you have any questions regarding this survey, please speak to your Partnership Development Manager.

[^0]:    ${ }^{1}$ PE is the planned teaching and learning programme in curriculum time that meets the requirements of the national curriculum for physical education.
    ${ }^{2}$ High quality is defined as 'producing young people with the skills, understanding, desire and commitment to continue to improve and achieve in a range of PE, sport and health-enhancing physical activities, in line with their abilities'. Learning through PE and Sport - A guide to the PE, School Sport and Club Links Strategy.

[^1]:    ${ }^{3}$ School sport includes any activity that requires physical skilfulness and is part of the school's planned formal, semi-formal, supervised or led provision. School sport typically takes place out of school hours.

[^2]:    ${ }^{4}$ High FSM is defined as more than $20 \%$ of children eligible; medium as $7 \%-19 \%$ of children; low as less than 7\% of children

[^3]:    ${ }^{5}$ The additional sports added in 2007/08 and 2008/09 have not been included in this table. Latest (2009/10) figures for the new sports are: cheerleading - $37 \%$; trampolining $-22 \%$; yoga $-22 \%$; circus skills - 18\%; handball - 15\%; fencing - 12\%; baseball - 7\%)

[^4]:    ${ }^{6}$ A number of 'new' sports were added to the questionnaire in 2007/08 and in 2008/09 - these are not included in this table. Latest (2009/10) figures for the new sports are: cheerleading - $20 \%$; trampolining $-16 \%$; yoga - 6\%; circus skills - 3\%; handball - 2\%; fencing - 7\%; baseball - 1\%)

[^5]:    ${ }^{7}$ In the last two surveys this question was asked about all those in Years $2-13$, while in previous surveys it concentrated just on those in Years 2-11.

[^6]:    ${ }^{8}$ Around $68 \%$ of 16-18 year olds in 2009 were in full-time education; $15 \%$ were in some form of education and training (ie. Work Based Learning, Employer Funded Training); 8\% were in work; and 9\% were Not in Education, Employment or Training (NEET). (Source: DfE (2010). Statistical First Release: Participation in education, training and employment by 16 - 18 year olds. SFR 18/2010)

[^7]:    * Definition of 'links': a college has links to clubs when students are actively guided towards club activities, either in a quality assured setting at the club itself, or on the college site. Activities on the colleges site would include regular coaching sessions and out-of-hours clubs organised by the club's coaches, but would not include one-off 'taster' sessions
    Students have to be actively participating with the club that has links to the college: it is not enough for the college simply to promote/advertise the club, as set out in the 'School-club links' guide.
